Research Question

- Billionaires are always under the scope and understanding how and where they invest their money will help others to grow their investments.

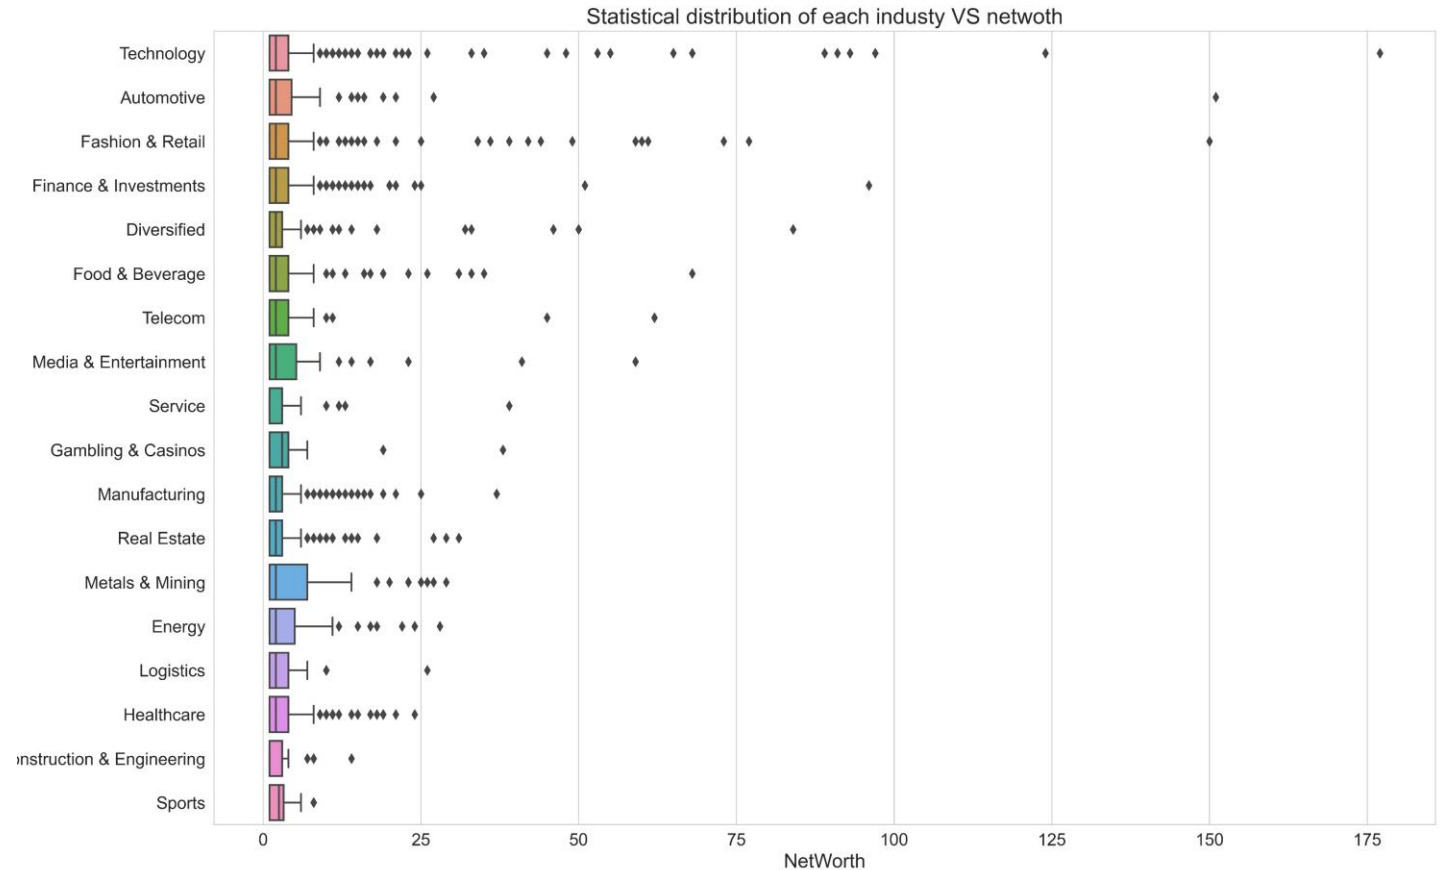

The relationship between industry and networth

- Scatter plot shows the relation between the industry and the networth, Technology is the most achieving industry.

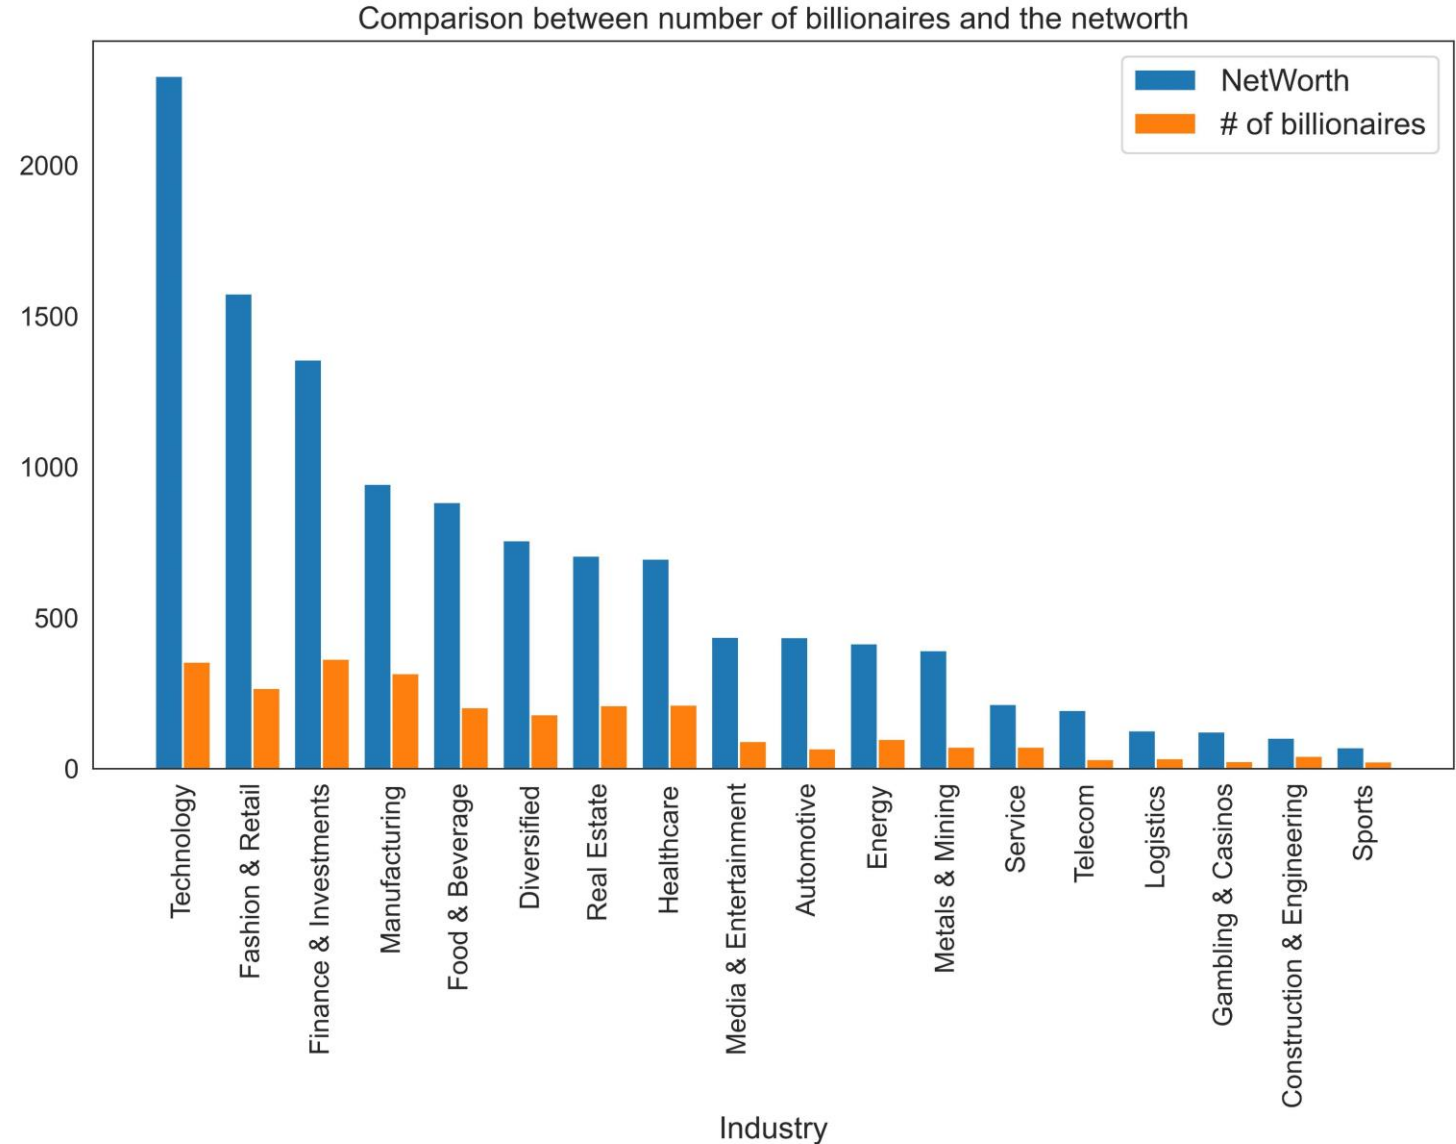

Statistical distribution of networth per industry

- Although technology is the number one networth-wise industry, the box plot shows that high networth values are outliers.

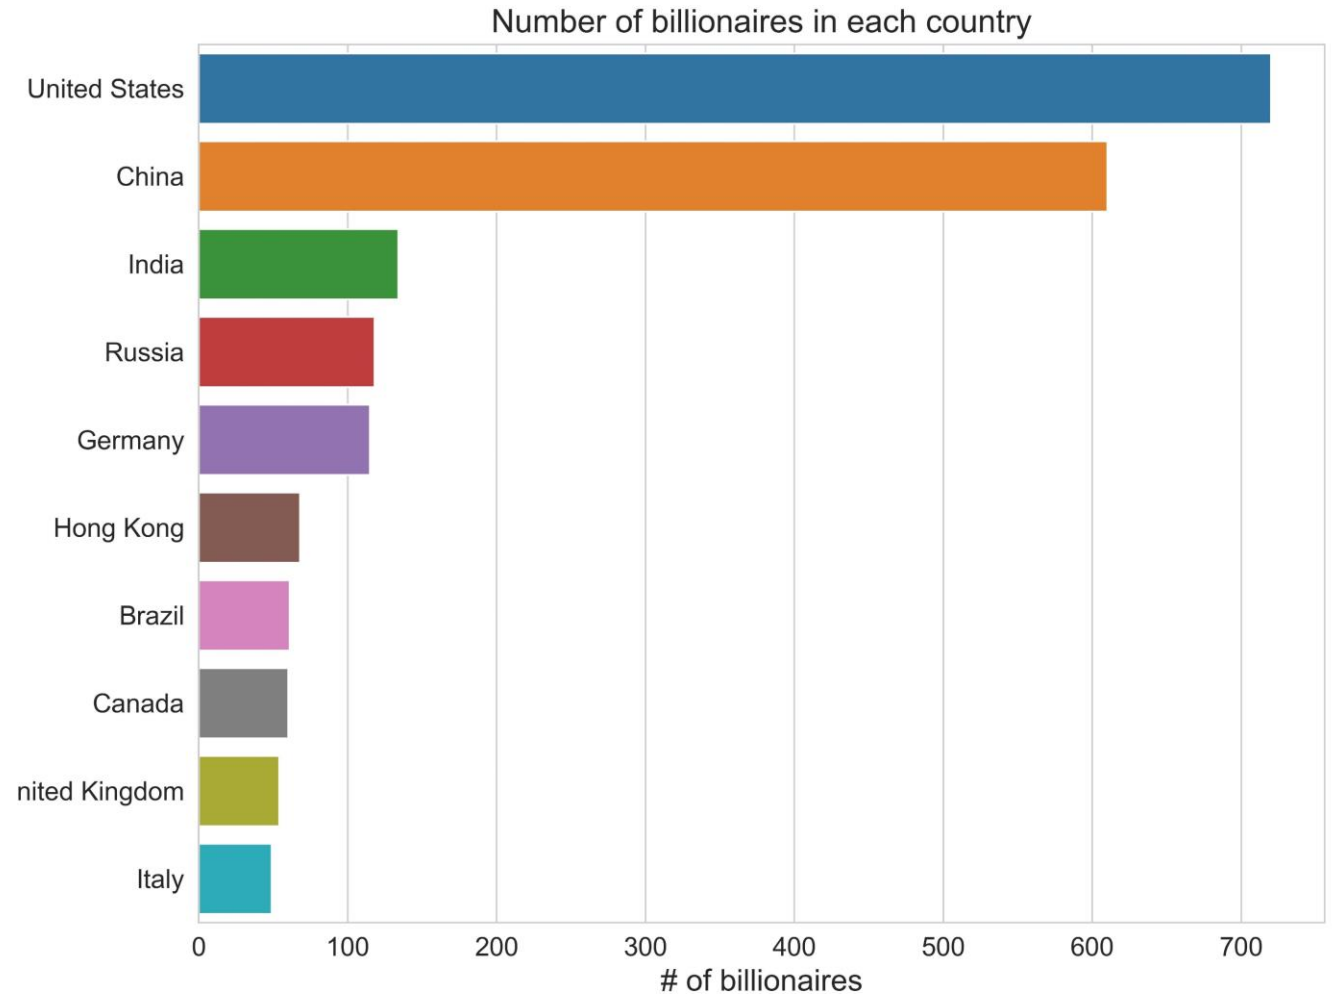

Comparison between number of billionaires and the network

- As shown from the grouped bar chart, Technology, Fashion & Retail, and Finance & Investments are having the highest number of billionaires.

Number of billionaires in each country

- The most billionaires are coming from the USA followed by China and India.

Conclusion

- 1) This dataset shows the billionaires around the world and their age, industry, country, and networth.
- 2) The dataset is almost clean and neat.
- 3) Billionaires in the technology industry seem to be the highest networth, but most of the values are outliers.
- 4) There is no relation between networth and age.
- 5) Technology, Fashion & Retail, and Finance & Investments are the most invested-in industries.
- 6) Real estate is the highest source for the networth.
- 7) Over 700 billionaires are from the USA, followed by china where there is over 600 billionaires.
